Donoussa
Municipality of News and Small Enterprises

PPP Scheme

- A PPP is used to fund construction and operation of one or more next generation satellites.
- To deliver 100Mbit/s satellite broadband services to consumers & businesses in broadband 'white areas' across the whole EU.
- Wholesale bandwidth from the satellites is sold to operators and then re-sold through their value chain to end-users.

Why Is It A Good Idea?

- It delivers the Digital Agenda targets for the most rural households and SMEs.
- It delivers not just 30 Mbps but 100 Mbps (by 2020)
- It provides high speed broadband which is affordable to consumers and SMEs

What Are the Challenges?

- The state aid position and the effect of competition on existing satellite operators needs clarification.
- The timeline for construction and launch of next generation (Terabit) satellites is 2020. It is not a short term solution.
- Funding would have to come from the EC.
